Decontamination Tank with Baked Lining

Midwest Tank Co. built this tank for the United Children's Hospital for chemical run-off. It is designed to be water tight and does not contain pressure. This is a buried tank with an 8 inch stainless steel pipe that runs parallel th the 24" dia access way. This picture shows a tank with a commercial blast on the exterior and a near white blast interior. The interior was lined with a Plasite 3066 and baked to the proper temp and time. The exterior was coated with coal tar epoxy.
